REC_DS using C_Week 7_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is: index = roll_number % table_sizeOn collision, check subsequent indexes (i+1, i+2, ...) until an empty slot is found.

You need to:

Insert a list of n student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

Input Format

The first line of the input contains two integers n and table_size, where n is the

number of roll numbers to be inserted, and table_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

Output Format

The output should print a single line with table_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 47
50 700 76 85
Output: 700 50 85 -1 -1 -1 76
Answer
#include <stdio.h>
#define MAX 100
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
    table[i] = -1:
}
int linearProbe(int table[], int size, int num) {
  int index = num % size;
  while (table[index] != -1) {
     index = (index + 1) \% size;
  return index;
void insertIntoHashTable(int table[], int size, int arr[], int n) {
```

```
241801314
                                                     241801314
  for (int i = 0; i < n; i++) {
    int pos = linearProbe(table, size, arr[i]);
    table[pos] = arr[i];
void printTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
    printf("%d ", table[i]);
  }
}
int main() {
                                                                                  241801314
  int n, table_size;
  scanf("%d %d", &n, &table_size);
  int arr[MAX];
  int table[MAX];
  for (int i = 0; i < n; i++)
     scanf("%d", &arr[i]);
  initializeTable(table, table_size);
  insertIntoHashTable(table, table_size, arr, n);
  printTable(table, table_size);
  return 0;
Status: Correct
                                                                          Marks: 10/10
